Implementasi UI untuk fitur pencarian ini merupakan salah satu fitur dasar yang umum ditemukan pada aplikasi nyata, khususnya aplikasi berbasis koleksi atau katalog.

Latihan 1: Membuat Halaman Search Page

Buatlah RFC untuk SearchPage dimana halaman ini akan menampilkan sebuah Text Input dan beberapa item buku yang telah dibuat pada latihan sebelumnya. Output: Tampilan akan seperti gambar disamping.

Source Code

```
1 > import { Ionicons } from "@expo/vector-icons"; ...
5
6 const SearchPage = () => {
7   const [text, setText] = useState("");
8
9   return (
10     <View style={styles.s_container}>
11       <Pressable style={styles.btn_search_section}>
12         <Ionicons
13           name="search-outline"
14           size={20}
15           color="gray"
16           style={{ marginRight: 15 }}
17         />
18         <TextInput
19           placeholder="Cari Judul Buku..."
20           value={text}
21           onChangeText={setText}
22           style={styles.search_sm}
23         />
24       </Pressable>
25     </View>
26   );
27 };
28
29 export default SearchPage;
```

StyleSheet CSS

```

156     s_container: {
157       flex: 1,
158       marginVertical: 50,
159       width: "100%",
160     },
161     btn_search_section: {
162       paddingHorizontal: 15,
163       flexDirection: "row",
164       height: 45,
165       alignItems: "center",
166       borderRadius: 12,
167       borderWidth: 1,
168       borderColor: "gray",
169     },
170     search_sm: {
171       flex: 1,
172       height: "100%",
173       fontSize: 18,
174       color: "□#333",
175     },

```

Latihan 2: Memanfaatkan reusable komponen

```

1  import { ScrollView, StatusBar, Text, View } from "react-native";
2  import { SafeAreaView } from "react-native-safe-area-context";
3  import ListBook from "../../constants/list_book";
4  import { color_list, styles } from "../styles/StyleApps";
5  import BookCollection from "../components/BookCollections";
6  import CTABook from "../components/CTABooks";
7  import Category from "../components/Categories";
8  import Header from "../components/Headers";
9
10  const Homescreen = () => {
11    const lastBook = ListBook[ListBook.length - 1];

```

```

searchpage.jsx U X  homescreen.jsx U  BookCollection.jsx U  SearchBar.jsx U  Scr
components > searchpage.jsx > SearchPage
13  // );
14  // }
15
16  import { ScrollView, StatusBar, Text, View } from "react-native";
17  import { SafeAreaView } from "react-native-safe-area-context";
18  import ListBook from "../../constants/list_book";
19  import SearchBar from "../praktikum-4/components/SearchBar";
20  import { color_list, styles } from "../styles/StyleApps";
21  import BookCollection from "../components/BookCollections";
22
23  const SearchPage = () => {
24    return (
25      <SafeAreaView style={styles.container}>
26        <StatusBar barStyle="dark-content" />
27        <SearchBar />
28        <ScrollView
29          showsVerticalScrollIndicator={false}
30          contentContainerStyle={{ paddingBottom: 20 }}
31        >
32          <View style={{ flex: 1 }}>
33            <BookCollection books={ListBook} />
34          </View>
35          <View>
36            <Text style={{ color: color_list.green, textAlign: "center" }}>
37              &copy; 2026 Nabilla Lintana Zian
38            </Text>
39          </View>
40        </ScrollView>
41      </SafeAreaView>
42    );
43  };
44

```

Output
